

ENVIRONMENTAL POLICY

This Organic Care Farm aims to be a centre of excellence providing:

- Training
- Education
- Therapeutic Opportunities
- Rehabilitation

Through integration with rural subjects such as sustainability, organic farming, growing, rural crafts, farmhouse cookery and environmental topics; we aim to respect the environment and encourage our participants to connect with the land/nature.

Our programmes make sure that service users are aware of good environmental practice and to fulfil our objectives we demonstrate good practice by:

- **Minimising waste and embedding recycling good practice**
- **Limiting the use of plastics**
- **Re-using materials such as timber and plant pots and catching and sorting rainwater.**
- **Using water and other materials efficiently.**
- **Operating in compliance with environmental legislation.**
- **Looking for opportunities to enhance the aesthetic appeal of reclaimed land, putting it to good use and increasing soil fertility by the addition of farm-produced organic matter.**
- **Looking for partners who can promote environmental understanding in the community, for example: social care, college students, school parties and other visitors.**

By ongoing review, we will ensure that we improve our environmental education, reduce our carbon footprint and further enhance our environmental policy.
